Nick,

The first reference appears to be a broker or transporter. I can only check out the final disposal, treatment or storage sites under the off-site rule. The second two I have called in and am waiting for a response.

Nick,

The Onyx facility in Port Arthur, Texas is eligible to receive. I haven't gotten a call back on the facility in Del.

Subject: Re: offsite compliance check 

Nick,

I can't really clarify. The state official said No the facility is not eligible to receive this waste. Perhaps there are problems with the facility or it could be a concern about the type of waste the facility is allowed to receive. I think you should tell your contractor that we were notified that the state of Delaware said the facility was not eligible and let them follow up.

Just to clarify on Clean Earth.....the PCBs have to be non-detect in the non-hazardous waste?

Nick,

The Clean Earth facility is not acceptable to receive non-hazardous wastes containing PCBs according to representative from the State of Delaware.

Dan
